

RMS 2019 TELEMETRY SOFTWARE

The BHI Energy telemetry monitoring software package provides an easy to use, reliable, comprehensive monitoring solution for radiological safety monitoring activities. The program suite includes system admin features for configuration and setup in addition to telemetry viewing programs - RMS Table & RMS View. With its latest release, RMS 2019 is compatible with Microsoft's current line of operating systems. RMS 2019 maintains the same application interface allowing existing RMS users immediate familiarity. New users are easily trained in a 2-hour session.

- Remote Alarm Display – Remotely monitors the alarm status of Tool and Portal Monitors, HEPA units for high flow, low flow or loss of power
- Telemetry Mobile App – Allows the user to view telemetry data on Android™, Windows™ or IOS™ handheld devices.
- Video Overlay – Writes dosimetric data to live video stream in Genetec™ and Milestone™
- Audible Notifications – Alerts Workers with audible dose rates and alarms via VCOM™ software

Access Control System Interface

Our remote monitoring software package interfaces with all access control systems such as REMS, HIS20 and Sentinel. The interface queries the access control database for the information related to the transmitting electronic dosimeter number so that the name, location, dose limit, rate limit and RWP are automatically populated in RMS.

Cache Data Engine Update

RMS 2019 utilizes an updated Cache Data Engine with the following benefits.

- Utilizes new performance database format so it processes code faster.
- Supports Windows Server 2008 R2, 2012, 2016 and Windows 7, 8 and 10.
- Increased database size up to 4TB or combine up to 8 separate databases up to 32TB.
- Supports shadow servers, mirroring & can join servers in clusters.
- Utilizes WIJ file to improve database integrity.
- Supports more sophisticated applications (future development).
- Web Services & Internal XML support.

Software Features

- System Administration – The program suite includes Setup, Table Edit, Colors, Log File Report, RMS Signs, Rad Worker Database & Simulator programs.
- Tool & Portal Monitors – Remotely monitor the alarm status of tool and portal monitors.
- HEPA Units – Remotely monitor the status of HEPA Units (low flow, high flow, loss of power, etc.)
- HTML Output – Create up to 99 HTML pages for your Intranet Rad Pro web page. Allows other departments to easily view area monitors, air activity monitors or just to monitor their own department's radiological work activities.
- Electronic Signage – Control Alpha signs over the site network and export dosimetric data for live display.
- Network Relays (Contact Closures) – Automatically controls relay function.
- OSI PI Integration – Output data to OSI PI plant process monitoring systems
- CAMs – Reads and displays data from Continuous Air Monitors (CAM) such as AMS4, Bladewerx, Mirion, 3M, etc.
- HSM – Reads and Displays data from Heat Stress Monitors
