

University & Research Reactor Decontamination & Decommissioning (D&D) Services

BHI Energy Engineering Division provides comprehensive services in support of university and research reactor D&D activities, including project planning, license termination, radiological, waste management and waste disposition services.

■ **Project Planning & License Termination**

The Conference of Radiation Control Program Directors Committee on Decontamination and Decommissioning recommends that licensees use MARSSIM to demonstrate compliance during decommissioning. BHI is an industry leader in the successful implementation of MARSSIM at small and large licensees in support of license termination or removing discrete structures, systems or components from license control. Our comprehensive experience includes project planning and controls, implementation, demolition, decontamination, survey, reporting and termination of Agreement State, Part 30 and Part 50 licenses.

■ **Radiological Services**

BHI Energy brings more than thirty years of experience in radiological planning, controls, monitoring and documentation to your facility. From Radiological Protection Plans through ALARA Engineering and Dosimetry Programs, BHI Engineers, Managers, Supervisors and Technicians bring the expertise and resources of the largest commercial supplier of Radiological Protection and Health Physics professional in the nuclear marketplace today. Our experience ranges from the intensity of the Three Mile Island recovery and cleanup to the routine monitoring of low-level radioactive storage areas and dental x-ray facilities. Large, small or in-between BHI Energy is the market leader in cost effective, high quality radiological services.

■ **Waste Management & Disposition**

BHI Energy personnel have planned, managed, characterized, received, surveyed, packaged, labeled, marked, manifested and shipped radioactive materials, waste and mixed waste at 100% of U.S. operating nuclear power stations, 82% of U.S. power reactor decommissioning projects and numerous university, research reactor and small license projects. We have developed and implemented radioactive material monitoring programs to assure clients operating under the general license requirements for source materials remain compliant under the provisions of the general licenses. BHI provides trained, certified personnel to clients in need of radioactive and mixed waste disposition.

Pricing & Schedule

BHI will commence work immediately upon receipt of the authorization to proceed

Pricing can be T&M, cost plus, fixed price or as scheduled by the client

Assumptions:

- ✓ Timely responses to requests for information
- ✓ Site access training for site walk down prior to estimates
- ✓ Fixed price cost to include customary travel expenses
- ✓ Additional correspondence, meetings and/or reporting other than as specified are not included
